

ARBOTTURA

Design: David Karásek, Radek Hegmon

Un elemento tradizionale dello spazio urbano in un concetto contemporaneo. Adatto a varie località, sia storiche che completamente moderne. Ci sono modelli rotondi e quadrati che possono essere combinati. La versione standard è progettata solo per aree pedonali; i modelli rinforzati consentono il passaggio di auto e piccoli furgoni fino a 3,5 tonnellate di peso lordo. Disponibile versione con particolarità dei profili verniciati a polvere. Questo concetto unico consente di creare interessanti motivi grafici che possono essere adattati alla della pavimentazione.

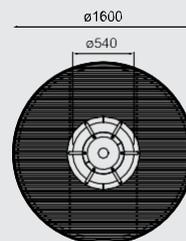

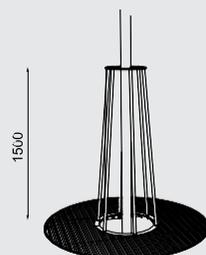

Struttura d'acciaio zincato a caldo senza verniciatura a polvere.
La struttura della base del ancoraggio è inclusa insieme al prodotto.
