**WOODPIX®**

**Un semplice gioco con i quadrati offre possibilità quasi illimitate quando si creano elementi di seduta in uno spazio pubblico.**

**Giocosità, creatività e irregolarità sono le parole che ti vengono subito in mente quando incontri la linea Pixel.**

**Inoltre,**

**c'è la dimensione dell'upcycling. Il sistema è stato progettato per utilizzare gli scarti di doghe in legno di qualità, che vengono prodotti durante la produzione di altri mobili e altrimenti diventerebbero rifiuti. Le doghe in legno vengono fissate ai telai quadrati mediante il sistema brevettato Woodpix®.**

**Un'alternativa al legno possono essere i tondini in acciaio, grazie ai quali le singole sedute acquisiscono trasparenza. Il design è completato da una serie di accessori come schienale in acciaio forato che può essere posizionato ovunque sulla zona di seduta, braccioli ottimizzati per gli anziani, vasi da fiori cilindrici o tavolini in acciaio aggiuntivi con possibilità di ricarica USB integrata.**

Struttura d'acciaio zincato rivestito con verniciatura a polvere. I sedili realizzati con doghe di legno sono dotati di un esclusivo sistema di fissaggio o griglie in tondini di acciaio zincato

e verniciato a polvere. La versione base presenta ancoraggio sotto il pavimento; un'altra versione è disponibile con ancoraggio sopra il terreno e un modello indipendente disponibile anche per uso interno.
